Cellar Plus System Part Numbers	N04110043, N04110044, N04110045, N04110046, N04110047, N04110048, N04110049, N04110050, N04110051, N04110052

Cellar Plus Evaporators—Updated Models

During July 2022, the full range of new EV Indoor evaporators will become available on the Cellar Plus systems replacing the current evaporator models as follows:

JCC2-40E >> JCC2-40EV JCC2-50E >> JCC2-50EV JCC2-60E >> JCC2-60EV JCC2-80E >> JCC2-80EV

The new 'EV' denoted Indoor evaporators will have the following features over the models that they replace reducing on-site installation time and cost:

- Fully fitted Danfoss TE2 expansion valve
- Fitted air straightener(s)

The expansion valves are pre-fitted with a suitably sized orifice. On the JCC2-80EV, a No. 3 orifice is pre-fitted in the valve (for use in the '70-S' 7kW systems. A No.4 orifice is supplied attached to the valve for use with the '80-S' 8kW systems. If an 8kW system is installed, the No. 3 orifice will need to be changed for the No.4 orifice.

Please note that for some orders delivered in July, the current 'E' evaporator models may be supplied and these will still come with expansion valve kits and air straighteners to be fitted on site.
